Dust Control Agent

NaturesOwn
We've Got You Covered

Environmentally Friendly

Dust has the capability to travel several miles when lifted into the air by weather or by human activity. It adversely affects potentially large areas. Dust can cause severe disruptions on a work site as well as raise concerns of the air quality of the communities and the environment that surrounds them.

NaturesOwn® Knockout dust control agent is derived from fatty acids which are 100% biodegradable. Depending upon the application, light to heavy traffic can immediately continue to travel over the treated area.

Knockout is easy to use and it will not cause corrosion or damage to your equipment!

"Knockout" your dust problem with this environmentally friendly, easy to apply solution!

Tote Specifications

140 lb/63.5 kg - empty
2624 lb/1190.2 kg - full
265 gallons

NaturesOwn® Knockout can be pumped hydraulically for spray-on applications using a water truck with standard spray bars.

Long Lasting

The typical application will remain effective for approximately 2 months if there is heavy traffic and for approximately 6 months if the traffic tends to be lighter in the areas that have been treated. The application provides instant results to the treated area and doesn't cause the soil to harden or crust.

NaturesOwn® Knockout mixes easily during the movement and agitation of the water and fatty acids that occurs while driving to location for application.

Specifications and Application Rates

Knockout is a dispersible suppressant that is easy to mix and apply. Simply follow the dilution formulas below depending on the desired effect that you are looking for. It is recommended that Knockout be added to the tank of the water truck before the water or allow the solution to thoroughly mix before applying. Mixing does not, however, require rigorous agitation. A standard application will last between 2-6 months, dependant upon environmental conditions and traffic volume. For a more robust application; simply use at a higher concentration.

- Light Traffic • 20 parts water:1 part Knockout • 1 acre at 20:1 is equal to 213.8 gal/809.32 liters
- Heavy Traffic • 10 parts water:1 part Knockout • 1 acre at 10:1 is equal to 427.6 gal/1618.64 liters
