

We've Got You Covered

Hamilton Manufacturing Inc. manufactures NaturesOwn™ erosion control products for the most rugged projects.

With over 48 years of experience in the erosion control industry, we take pride in producing 100% of our mulch products in the USA. Our products are tested by third parties, industry proven, and designed by highly qualified engineers to meet our customer's demands.

This tri-fold is designed to create a better understanding of our products with a general over view. Please consult with HMI for exact technical documentation, regional distribution, and application rates.

NaturesOwn X9000™ BFM (Bonded Fiber Matrix) is produced, patented, designed, and tested (University of San Diego California) to tackle the toughest erosion control projects in the industry. Strong natural fibers homogenized with an unmatched tackifier to ensure erosion control success without restricting natural growth. This product was designed to withstand heavy rains over a long period of time on steep slopes. X9000 BFM is HMI's premium product.

NaturesOwn Evolution™ fibers are patented and produced to fulfill the need for ever growing extreme erosion worldwide at a fraction of the costs compared to our competitors. When combined with NaturesOwn Triple Tac™, Evolution is rated as a Stabilized Material Matrix (SMM) but comparable to most BFMs in the industry with up to 3 times the savings.

Natures Own
Additional Products;
Hydro Compost
Erosion Control Blankets
Sediment Control Wattles
Hydro Mulchers

NaturesOwn Triple Tac™ is an organic biodegradable tackifier that disperses rapidly in cold water and cures immediately after application. Triple Tac is a premium tackifier for use in extreme climate and surface conditions. Triple Tac™ reduces evaporation and nutrient leaching as well as protects against soil erosion by creating a strong matrix with the soil and hydroseeding mulch. It mixes easily with water and prevents plugging.

NaturesOwn High Density™ mulch is a cellulose fiber mulch manufactured from clean recycled newspaper, which spreads evenly upon application allowing for uniform seed and mulch distribution. NaturesOwn mulch is used for various hydro-seeding/erosion control projects and has a 20% more loading capacity than wood mulch. High Density's™ performance makes this popular product ideal for most conditions especially when combined with Triple Tac™.

NaturesOwn C:tac™ is a soil binder, tackifier, and conditioner that is applied to surface areas during hydro-mulching applications. C:tac™ is biodegradable, environmentally safe, and EPA exempt. C:tac™ reduces water runoff by tying soil particles together and is an ideal additive to prevent machine clogging. C:tac™ enhances water infiltration in the soil allowing for longer periods between watering.

NaturesOwn Jet Mix™ is a rapid dispersion fiber mulch manufactured to meet the requirements of jet agitated hydro mulching machines. Increased wetting agents allow for quicker mixing. Jet Mix™ is made from recycled newspaper fibers and works great for residential lawns, parks, and commercial greens. We recommend the combination of Jet Mix™ with NaturesOwn C:tac™ to deliver much needed moisture to seedlings and to promote a slick slurry for rapid applications.
